STP Campaign

is an international activist initiative that works for depathologization of trans expressions, trajectories and identities. The principal demands of STP are the removal of the ‘Gender Dysphoria’ / ‘Gender Identity Disorders’ categories from the diagnosis manuals DSM and ICD, as well as the guarantee of trans health rights, including public coverage of trans-specific health care and a change of the actual evaluation model towards one based on autonomy and informed decision.
**Demand**

1. The removal of the “Gender Dysphoria” / “Gender Identity Disorders” categories from the international diagnosis manuals (their next versions DSM-5 and ICD-11).

2. The abolition of binary normalization treatments to intersex people.

3. Free access to hormonal treatments and surgery (without psychiatric monitoring).

5. The fight against transphobia: the work for educational training and social inclusion and employment for trans people, as well as the visibility and reporting of all types of social or institutional transphobia.

***

More than 360 activist groups, organizations and networks from Africa, Asia, Europe, Latin America, North America and Oceania support the STP Campaign.
